

ABRAPURI MUGDHA HEMA SRI

+91 9347873378 | mugdhahemasri08@gmail.com | [website](#)

GenAI Engineer with 3+ years of experience designing, fine-tuning, and deploying Large Language Models (LLMs) into production environments. Expert in building Retrieval-Augmented Generation (RAG) pipelines, agentic workflows, and prompt engineering to solve complex business problems. Proficient in Python, LangChain, vector databases, and MLOps tools (AWS/AZURE)

SKILLS

Python | SQL | HTML | CSS | JS | aws-sdk | AWS Bedrock | s3 | Textract | OpenSearch | Amazon Q
DataBricks | workflow-runs | Azure AI | ADLS | Document Intelligence | Azure Search | Github Copilot
LangChain | Claude | Azure OpenAI | Nova | Gemini | SupaBase Vector DB | Code Spaces | Codex

EXPERIENCE

Infosys- Senior Systems Engineer

March 24 – Present

- Involved in design and development of architecture for data ingestion pipelines into s3 using APIs on GitHub Codespaces.
- Augmented, cleaned and pushed document metadata to Postgres SQL Server and data into Amazon Textract and further ingested it to s3.
- Utilized Lang Chain chunking splitter to create Embeddings using **amazon-titan-text-embeddings** model along with Indexing them in OpenSearch Service.
- Built Chatbot Process Architecture which involved both RAG and Chat Flow to fetch information about Data and Metadata.
- Deployed the robust pipeline/workflow for Standalone Query Generation, User Query Categorization and Final Response Generation with OpenSearch.
- Established a feedback loop system to continuously improve model output based on user interactions and preferences.

Systems Engineer

March'23 - March'24

- Architected and deployed LLM-powered intelligent assistants for internal teams and generative models for content creation for marketing campaigns.
- Implemented prompt engineering templates with few-shot learning and chain-of-thought

Trainee

Oct'22 – March'23

- Developed a chatbot using generative AI techniques to enhance customer support.

EDUCATION

Anurag University, Kodad

Bachelor of Technology in Computer Science

CGPA - 8.5

PERSONAL PROJECTS

WEBSEARCH: Developed using Tavily Api for source & Gemini for content generation. [\[link\]](#)

MULTIMODEL SEARCH: Implemented using image **gemini-2.5-flash**, pypdf for multisearch. [\[link\]](#)
